

Star Box Make Sheet

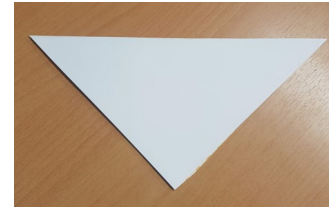

Take a square sheet of paper

1

Fold it from the top corner to bottom corner to form a triangle

2

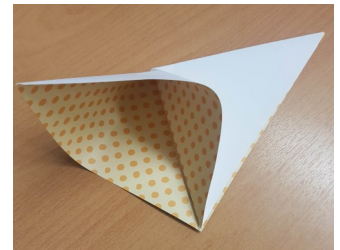

Unfold it, then fold the right corner to the left corner to form a triangle

3

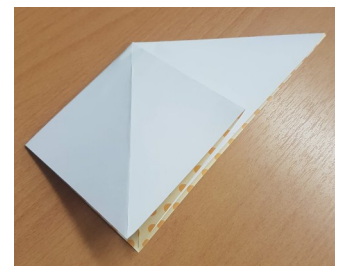

Take the right side and again fold it up then open the sides to form the top layer so you can squash fold the right corner to the bottom corner as shown in the pictures.

4

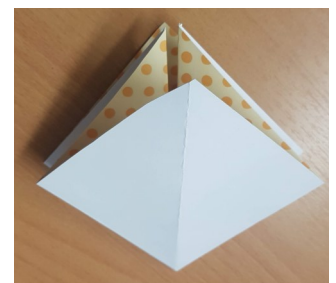

Turn the paper over
Lift the left flap vertically, then open and squash down like the other side

5

Rotate so it's up side down—the open edges are at the top

6

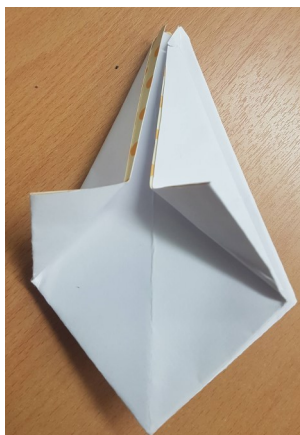

7 Fold the left and right corners to the centre.

Turn the paper over and fold the left and right sides to the centre

8

9

Fold those same corners to the outside edge then unfold to make creases

Open the flap and squash fold the bottom part

10

11

Repeat on the right side

Tuck the left flap behind itself, then do the same to the right flap

12

13

Turn the object over and repeat steps 9 to 12 so it looks like step 13

14 Fold the bottom up at the corners to create a triangle, then unfold.

Fold the top triangle as pictured **15**

16 Fold the back triangle down, exposing another two triangles.

Repeat steps 15 and 16 until **17** you get this shape

18 Carefully open the figure from the top and straighten out all sides so they're straight. The bottom should flatten out.
