

Forced Perspective Photography

The **forced perspective technique** manipulates our human perception with the use of optical illusions to make objects appear larger, smaller, farther, or closer, or on a different plane of gravity! It is a form of Surrealism. *Create x6 different ones using your mobile phones and upload to an A4 google doc.* Follow the instructions below, have fun and be creative!

1. You need to make one subject close to the camera and one further away
2. Make them look like they are in the same place by lining them up
3. You can also try changing angles to make objects defy gravity - see images below.

Gravity defying:
